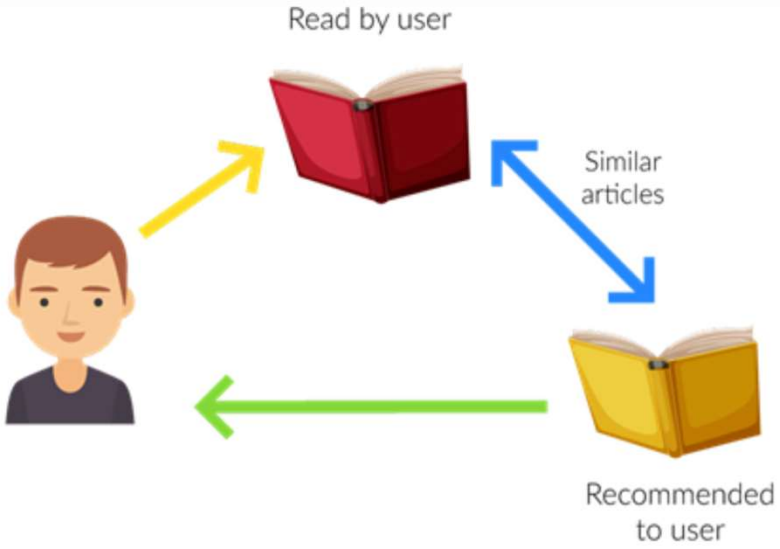
Recommendation System



Group 3
Ankita Bagaria, Hao Chun Niu (Eric), Jing Xie, Riya Khurana, Travis St. Louis

Outline

01 Business Problem

02 Collaborative Filter Recommender System

03 Technology Used

04 System Instruction

05 Future Steps

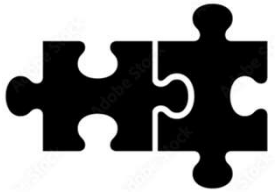
Business Problem

Value for Customer

Improve Customer Experience

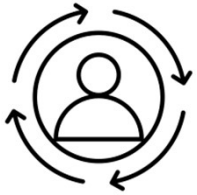
Discover new things

Reduced browsing time



Complementary items

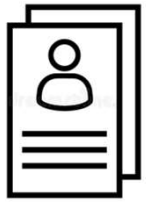
Value for Business



Improved Customer Loyalty

Personalized Service

Increased sales & conversion rate



More customer knowledge

Item Based Recommender System

Users	Harry Potter	A Tale of Two Cities	The Silent Patient	Alice in Wonderland
	5	1	5	4
	4	4	3	3
	3	5	2	3
	1	2	4	

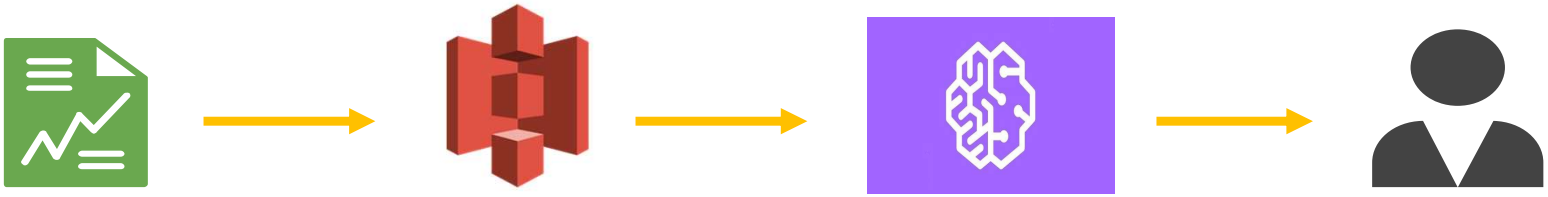
Item to Item Similarity

$$Similarity(\vec{A}, \vec{B}) = \frac{\vec{A} \cdot \vec{B}}{||\vec{A}|| * ||\vec{B}||}$$

Prediction Computation

$$rating(U, I_i) = \frac{\sum_j rating(U, I_j) * s_{ij}}{\sum_j s_{ij}}$$

Technology Used



Data Set

Historical data obtained on books rating from Kaggle

Amazon S3

Stored data into S3 for further processing

Amazon Sagemaker

Built memory based recommendation system within Sagemaker

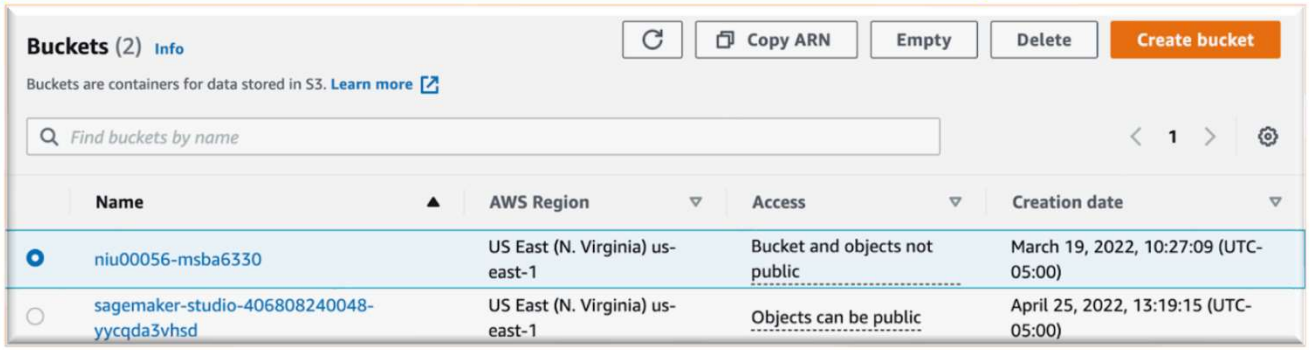
End users

Promote cross-selling by showing top recommended books to customers

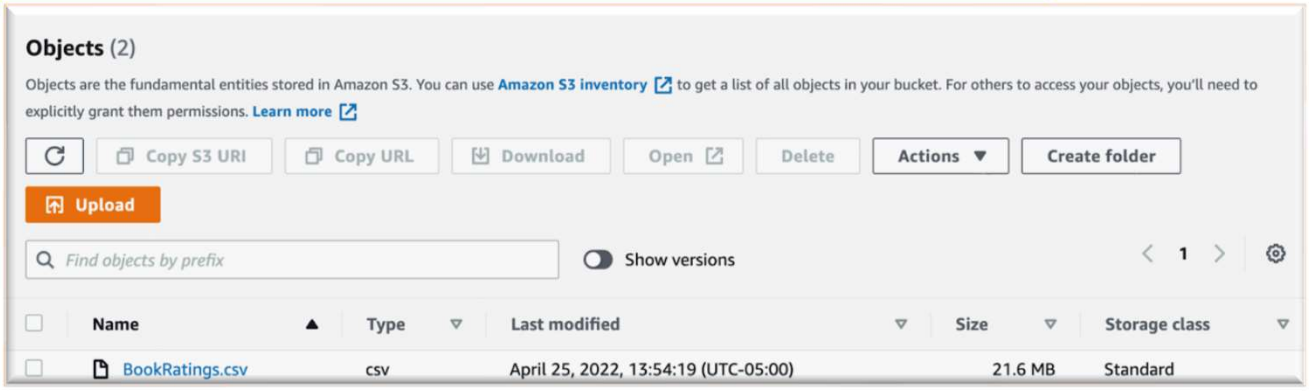
The implementation of recommendation system is quite straightforward and requires only a storage platform and Machine Learning tool

S3 Data Storage Process Flow

Step1. Create S3 Storage Bucket



Step2. Upload Data into Bucket



Model Development Using Sagemaker

Step1. Calculate Book Similarity

```
#Recommeder System
# store the original dataset in 'df', and create the copy of df, df1 = df.copy().
def book_recommender(user, num_neighbors, num_recommendation):
  number_neighbors = num_neighbors

  knn = NearestNeighbors(metric='cosine', algorithm='brute')
  knn.fit(df.values)
  distances, indices = knn.kneighbors(df.values, n_neighbors=number_neighbors)

  user_index = df.columns.tolist().index(user)

  for m,t in list(enumerate(df.index)):
    if df.iloc[m, user_index] == 0:
      sim_books = indices[m].tolist()
      book_distances = distances[m].tolist()

      if m in sim_books:
        id_book = sim_books.index(m)
        sim_books.remove(m)
        book_distances.pop(id_book)

      else:
        sim_books = sim_books[:num_neighbors-1]
        book_distances = book_distances[:num_neighbors-1]

      book_similarity = [1-x for x in book_distances]
      book_similarity_copy = book_similarity.copy()
      nominator = 0
```

Step2. Make Predictions

```
      for s in range(0, len(book_similarity)):
        if df.iloc[sim_books[s], user_index] == 0:
          if len(book_similarity_copy) == (number_neighbors - 1):
            book_similarity_copy.pop(s)

          else:
            book_similarity_copy.pop(s-(len(book_similarity)-len(book_similarity_copy)))

        else:
          nominator = nominator + book_similarity[s]*df.iloc[sim_books[s],user_index]

      if len(book_similarity_copy) > 0:
        if sum(book_similarity_copy) > 0:
          predicted_r = nominator/sum(book_similarity_copy)

        else:
          predicted_r = 0

      else:
        predicted_r = 0

      df1.iloc[m,user_index] = predicted_r
  recommend_books(user, num_recommendation)
```

book_0140272100 - Vanished
book_0316601950 - The Pilot's Wife : A Novel
book_0316776963 - Me Talk Pretty One Day
book_0316899984 - River, Cross My Heart
book_0375400117 - Memoirs of a Geisha
book_0385316895 - Legacy of Silence
book_0385720106 - A Map of the World
book_0425163407 - Unnatural Exposure
book_044023722X - A Painted House
book_0446364800 - The General's Daughter
book_0446606383 - The Midnight Club
book_0449006522 - Manhattan Hunt Club
book_0553580388 - The Patient
book_0786863986 - A Monk Swimming
book_0803251718 - Crazy Horse

Limitations

1. Limited computational resources
2. Number of recommendations
3. Measurement of recommendation system
4. Finding niche items

Conclusion

- Business value
- How recommendation system works
- Our book recommendation system
  - Technology used
  - Prediction process
  - Recommendation output
- Limitations of recommender system
- Benefits
  - Improved customer experience
  - Personalized service
  - Increased sales
